**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/736,645

**Applicant(s)**

MCELHANNON, JAMES L.

**Examiner**

DANIEL P. VETTER

**Art Unit**

3628

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 05 February 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-6 and 8-13 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-6 and 8-13 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-8508)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Status of the Claims***

1. Claims 1-13 were previously pending in this application. Claims 1, 10, and 12 were amended, and claim 7 was canceled in the reply filed February 5, 2008. Claims 1-6 and 8-13 are currently pending in this application.

### ***Continued Examination Under 37 CFR 1.114***

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 5, 2008 has been entered.

### ***Response to Arguments***

3. Applicant's arguments with respect to the rejections made under §§ 102(b) and 103(a) have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:
- The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claims 1-6, 8, and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
6. Claims 1-6, 8, and 9 are directed to a "system" and therefore not considered processes for the purposes of § 101. However, these claims recite actions or steps as part of the system (e.g., "module that detects errors . . . and generates error recovery information", "the printer prints a recovery coupon", etc.). A single claim that claims

Art Unit: 3628

both an apparatus and the method steps of using the apparatus is indefinite. *IPXL Holdings v. Amazon.com, Inc.*, 430 F.2d 1377, 1384, 77 USPQ2d 1140, 1145 (Fed. Cir. 2005). These claims do not properly apprise the public as to what would constitute infringement (i.e., creation of the claimed system or the act of using it) and accordingly are rejected as vague and indefinite under § 112, second paragraph.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 1, 3, 4, 6, and 9-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shindo, Japanese Pat. Pub. No. 09-035129 (Reference N of the PTO-892 part of paper no. 20071120) in view of Griffioen, et al., U.S. Pat. Pub. No. 2002/0188934 (Reference A of the attached PTO-892) and Kimata, U.S. Pat. No. 5,043,561 (Reference C of the PTO-892 part of paper no. 20070424).

9. As per claim 1, Shindo teaches an automated error detection and recovery system for a common use self service kiosk in which a user reads commands and inputs responses in an automated process, comprising: an error detection module that detects errors in the commands or responses that occurred during the automated process (Example ¶1) and generates error recovery information (Means for Solving the Problem ¶1); a printer associated with the error detection module (Means for Solving the Problem ¶1), wherein the printer prints a recovery coupon containing information pertaining to the generated error recovery information (Means for Solving the Problem ¶1); a document reader to read the recovery coupon and the information pertaining to the generated error recovery information (Effect of the Invention ¶1); and an error recovery module that determines a status of the automated process and the commands or

Art Unit: 3628

responses contained therein, based on the generated error recovery information contained in the recovery coupon (Example ¶I).

Shindo does not explicitly teach that the status indicates which of the commands succeeded and which failed; which is taught by Griffioen (¶ 0029). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Griffioen into the system taught by Shindo because this is merely a combination of old elements. In the combination each element would have performed the same function as it does separately, and one skilled in the art would have recognized that the results of the combination were predictable and obtainable through routine engineering. Shindo further teaches the error recovery module analyzes the status information (Effect of the Invention ¶I), but does not explicitly teach that the error recovery module provides solutions for detected errors; which is taught by Kimata (column 18, lines 54-55). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Kimata into the system taught by Shindo so that a clerk can adjust fare amounts on after a check-in error (as taught by Kimata; column 18, lines 54-55).

10. As per claim 3, Shindo in view of Griffioen and Kimata teaches the system of claim 1 as described above. Shindo further teaches the reader is located at an agent workstation separate from the kiosk (Effect of the Invention ¶I). Shindo further teaches the error recovery module is contained in a server connected to an agent workstation separate from the kiosk (Example ¶I) rather than at the agent workstation itself. However, it would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the error recovery module is located at an agent workstation separate from the kiosk because placing the module in the workstation itself rather than in a connected server is simply a matter of obvious engineering choice to eliminate the need for a separate server. See *In re Larson*, 340 F.2d 965, 968; 144 USPQ 347, 349 (CCPA 1965) (claims using a one-piece construction held obvious over a prior art reference that disclosed only the connected parts).

Art Unit: 3628

11. As per claim 4, Shindo in view of Griffioen and Kimata teaches the system of claim 1 as described above. Shindo further teaches the error recovery module is contained in a server connected to an agent workstation separate from the kiosk (Example ¶).

12. As per claim 6, Shindo in view of Griffioen and Kimata teaches the system of claim 1 as described above. Shindo further teaches the user is an airline passenger and the automated process is a passenger check-in process (Abstract (see Use/Advantage); Industrial Application ¶).

13. As per claim 9, Shindo in view of Griffioen and Kimata teaches the system of claim 1 as described above. Shindo further teaches the agent workstation includes the document reader to read the recovery coupon (Effect of the Invention ¶). Kimata further teaches the agent workstation includes: a display for displaying generated error recovery information and proposed solutions for the detected errors (column 8, line 54); an operator interface for executing the solutions (column 8, line 62); a printer for printing finalized documents (column 8, line 58). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Kimata into the system taught by Shindo so because this is merely a combination of old elements. In the combination each element would have performed the same function as it does separately, and one skilled in the art would have recognized that the results of the combination were predictable and obtainable through routine engineering.

14. As per claim 10, Shindo teaches a method of error detection and recovery during automated passenger check-in at a common use self service kiosk in which a passenger reads commands and inputs responses in an automated check-in process, comprising: monitoring the passenger check-in process for errors (Means for Solving the Problem ¶); generating error recovery information when an error is detected (Means for Solving the Problem ¶); printing a recovery coupon encoded with at least one of the generated error recovery information and a pointer to the error recovery information (Means for Solving the Problem ¶).

Art Unit: 3628

Shindo does not explicitly teach determining which of the commands succeeded and which failed; automatically providing at least one solution to the error; and correcting the detected error based on the information printed on the recovery coupon. Griffioen teaches determining which of the commands succeeded and which failed (§ 0029). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Griffioen into the system taught by Shindo because this is merely a combination of old elements. In the combination each element would have performed the same function as it does separately, and one skilled in the art would have recognized that the results of the combination were predictable and obtainable through routine engineering. Kimata teaches providing at least one solution to the error (column 18, lines 54-55), and correcting the detected error based on the information printed on the recovery coupon (column 18, lines 65-68). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Kimata into the method taught by Shindo to perform fare adjustment processing so that the passenger can proceed after an error (as taught by Kimata; column 19, line 4). While Kimata does not teach that providing the solution occurs automatically, broadly providing an automatic means to accomplish a known activity is not sufficient to distinguish a claimed invention over the prior art. *In re Venner*, 262 F.2d 91, 95, 120 USPQ 193, 194 (CCPA 1958). In this case, providing the solution automatically would have been an obvious expedient that could have been obtained through routine engineering producing predictable results.

15. As per claim 11, Shindo in view of Griffioen and Kimata teaches the method of claim 10 as described above. Shindo further teaches reading the information printed on the recovery coupon (Function ¶) and determining the status of the commands or responses based on the information read from the coupon (Function ¶). Kimata further teaches providing at least one solution for the errors based on the information read from the recovery coupon (column 18, line 55). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above

Art Unit: 3628

teachings of Kimata into the method taught by Shindo in view of Kimata so that a clerk can perform fare adjustment processing after an error has occurred (as taught by Kimata; column 18, lines 54-55).

16. As per claim 12, Shindo teaches a method of error detection and recovery during automated passenger check-in at a common use self service kiosk in which a passenger reads commands and inputs responses in an automated check-in process, comprising: monitoring the automated passenger check-in process at a kiosk (Means for Solving the Problem ¶); generating error recovery information at the kiosk when an error is detected (Means for Solving the Problem ¶); printing a recovery coupon at the kiosk encoded with at least one of the generated error recovery information and a pointer to the error recovery information using a printer at the kiosk (Means for Solving the Problem ¶); generating a message for display on a kiosk display instructing the passenger to bring the recovery coupon to an agent (Example ¶); reading the recovery coupon at an agent workstation (Function ¶); and determining a cause of the detected error based on the information read from the coupon (Example ¶).

Shindo does not teach determining which of the commands succeeded and which failed, automatically providing at least one solution to the error; correcting the error; and printing passenger travel documents. Griffioen teaches determining which of the commands succeeded and which failed (¶ 0029). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Griffioen into the system taught by Shindo because this is merely a combination of old elements. In the combination each element would have performed the same function as it does separately, and one skilled in the art would have recognized that the results of the combination were predictable and obtainable through routine engineering. Kimata teaches providing at least one solution to the error (column 18, line 55); correcting the error (column 18, lines 65-68); and printing passenger travel documents (column 18, line 67- column 19, line 1). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Kimata into the method taught by Shindo to perform fare adjustment

processing so that the passenger can proceed after an error (as taught by Kimata; column 19, line 4). While Kimata does not teach that providing the solution occurs automatically, broadly providing an automatic means to accomplish a known activity is not sufficient to distinguish a claimed invention over the prior art. *In re Venner*, 262 F.2d 91, 95, 120 USPQ 193, 194 (CCPA 1958). In this case, providing the solution automatically would have been an obvious expedient that could have been obtained through routine engineering producing predictable results.

17. As per claim 13, Shindo in view of Griffioen and Kimata teaches the method of claim 10 as described above. Kimata further teaches monitoring the passenger check-in process for potential security issues (column 18, line 56); and notifying the proper authorities when a potential security issue is detected (column 18, line 60). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Kimata into the method taught by Shindo in view of Kimata in order to prevent illegal boarding (as taught by Kimata; column 18, lines 56-60).

18. Claims 2 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shindo in view of Griffioen and Kimata as applied to claim 1 above, in further view of Enta, U.S. Pat. No. 5,983,197 (Reference A of the PTO-892 part of paper no. 20070424).

19. As per claim 2, Shindo in view of Griffioen and Kimata teaches the system of claim 1 as described above. Shindo does not explicitly teach the error detection module is contained in a server connected to the kiosk. Enta teaches the error detection module is contained in a server connected to the kiosk (Abstract). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Enta into the system taught by Shindo in order to making decisions remotely for support dispatch (as taught by Enta; Abstract).

20. As per claim 8, Shindo in view of Griffioen, Kimata and Enta teaches the system of claim 2 as described above. Shindo further teaches the kiosk includes: a display for

displaying the commands to the user (Example ¶); an operator interface for entering the responses to the commands (Example ¶); and the printer for printing at least one of finalized document and the recovery coupon (Means for Solving the Problem ¶).

21. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shindo in view of Griffioen and Kimata as applied to claim 1 above, in further view of Pugliese, et al., U.S. Pat. Pub. No. 2001/0016825 (Reference B of the PTO-892 part of paper no. 20070424).

22. As per claim 5, Shindo in view of Griffioen and Kimata teaches the system of claim 1 as described above. Shindo does not explicitly teach the automated error detection and recovery system is networked with an airport database. Pugliese, et al. teaches the automated error detection and recovery system is networked with an airport database (¶ 0044). It would have been prima facie obvious to one having ordinary skill in the art at the time of invention to incorporate the above teachings of Pugliese, et al. into the system taught by Shindo in order to access passenger records during check-in (as taught by Pugliese, et al.; ¶ 0044).

### **Conclusion**

23. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Richardson, et al., U.S. Pat. No. 5,644,494 (Reference B of the attached PTO-892) teaches a document (or medium) collating/printing system provides automated error detection and error recovery in a high-volume printing application.

24. Any inquiry concerning this communication or earlier communications from the examiner should be directed to DANIEL P. VETTER whose telephone number is (571)270-1366. The examiner can normally be reached on Monday through Thursday from 8am to 6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Hayes can be reached on (571) 272-6708. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 3628

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

/JOHN W HAYES/

Supervisory Patent Examiner, Art Unit 3628
